Coil Cleaning

A powerful organic coil cleaner that allows CIP cleaning.

Triple7 EnviroCoil is a powerful bio-based, non-toxic and non-hazardous product especially designed to remove heavy deposits and mould growth on coils & HVAC systems.

The product is a unique, non-corrosive formulation that enables CIP coil cleaning, with greatly reduced handling and OH&S issues.

Benefits of Triple7 EnviroCoil

- High performance
- Protects cleaning surface, non-corrosive
- Easier maintenance – allows CIP cleaning
- Reduced health issues – non-toxic
- Reduced handling issues – non-hazardous, non-flammable
- Cost saving – highly concentrated
- Protects the environment – readily biodegradable

Triple7 EnviroCoil is free of: caustics, phosphates, strong acids, petroleum products, terpenes, glycol ethers and ammonium compounds.

Method of Application

Switch off power. For health and safety reasons, never attempt cleaning a coil with visible mould growth, unless you are suitably qualified.

Ensure condensate tray is draining.

Gently remove heavy deposits from the coil surfaces with a vacuum fitted with a high efficiency filter and brush attachment.

Spray diluted Triple7 EnviroCoil directly into both sides of the coil. Ensure that Triple7 EnviroCoil gets deep into the coil.

Never use high pressure water across the face of the coil. Only spray directly into coil.

Wait five minutes then rinse coil thoroughly with high pressure water directly into both sides of coil.

Heavily fouled coils may require additional attempts to achieve the desired results - aim to restore maximum airflow capacity, rather than to make the fins shiny.
